Sayfa 1 / 2

Water Permeability Analysis

Procedure

-	Samples are prepared in accordance with normal conditions of use and applied homogeneously to a plate surface and kept until the curing process is completed.
-	After the curing process is completed, the samples are carefully removed from the plate.
-	Blotting paper is placed on a petri dish; the cured sample is positioned on the blotting paper.
-	2–3 drops of pure water are dropped onto the sample surface.
-	The stopwatch is started and the sample surface is rubbed with the help of the fingertip.

Evaluation

2–3 drops of water applied to the sample surface passed under the sample and wet the blotting paper in approximately 4–5 seconds as a result of the rubbing process with the fingertip. This situation meets the customer criteria.
